

Ball-Bearing Slide Replacement / Installation Instructions

Side Mount Full Extension Ball-Bearing Drawer Slide

24SLIDE SET FULL EXT (includes 2)

Mounting:	Side	Finish:	Zinc Plated
Clearance:	1/2" [12.7mm + 8mm minus 0]	Action:	Full Extension
Load:	100 lb.		
Height:	1.79" [45.5mm (± 0.3)]		

Remove all old slide hardware including all brackets and screws.

Locate the small drawer box slide, and using two screws (A), fasten it to the drawer box as shown.

Temporarily place the back of the large drawer box slide into the mounting bracket.

Place the slide on the frame of the cabinet, and push the slide into the bracket until the front of the slide is flush with the outside of the frame.

Check that the slide is both level, and parallel to the cabinet. Mark the back of the cabinet, and drill 2 .0625" diameter pilot holes.

Using two screws (B), loosely attach the mounting bracket to the back. Do not overtighten! Doing so may cause the drawer to bind.

Place the slide into the bracket, and attach the final screw (A) through the frame. Tip: Pull the slide forward slightly to expose the hole.

Repeat for the other side and any additional drawers. Line the slides up and push into the cabinet. To remove, push/pull the release clip.
